

So, do you want to **learn Joomla**? Well, let me tell you that you have come to the right place to start learning Joomla by using video resources. For those who don't know this system, Joomla is a CMS software that lets you create websites, intranets, and other web tools.

CMS stands for Content Management System which is a program that let non-technical people update, modify, and even create websites.

The best thing of **Joomla** is that is totally FREE and you won't need to pay anything to download and develop websites in Joomla. The only money you will be expending is the money you are going to be paying to your hosting companies.

Some of the hosting companies that I will recommend for Joomla are the following

1. [Fastdomain](#)
2. [Bluehost](#)
3. [Hostmonster](#)

Check our [Introduction to Joomla](#) to learn more about the best hosting for Joomla or go directly to our [Joomla Basic Training](#) Free Video Tutorials.

Besides, Joomla is so much more than just a powerful Content Management System that you can develop any kind of website.

Now, if you are wondering who uses Joomla?

Joomla is used all around the world by universities, medical sites, small businesses, bloggers, churches, consultants, non-profits, and even government agencies. If you want to take a look to live sites just click on this link. [Joomla Showcase Sites](#)

It is easy to use?

I will be honest, nothing in this world is easy, but if you master this software you are going to love it and the most important is that you can even make a profit.

Two years ago, I was not a web designer, and not even thinking to become one, but when I found Joomla to many doors were opened to me, and now I continue working **developing sites in Joomla**

So, that's why I developed these FREE video tutorials for you to learn this wonderful and powerful system.

So don't waste your time and start learning now with our [Joomla Basic Training](#) Tutorials for FREE.
